However, **only ~7% of patients** can benefit of genome analysis today

Problem: Genome Analysis Does Not Scale

Problem: Genome Analysis Does Not Scale

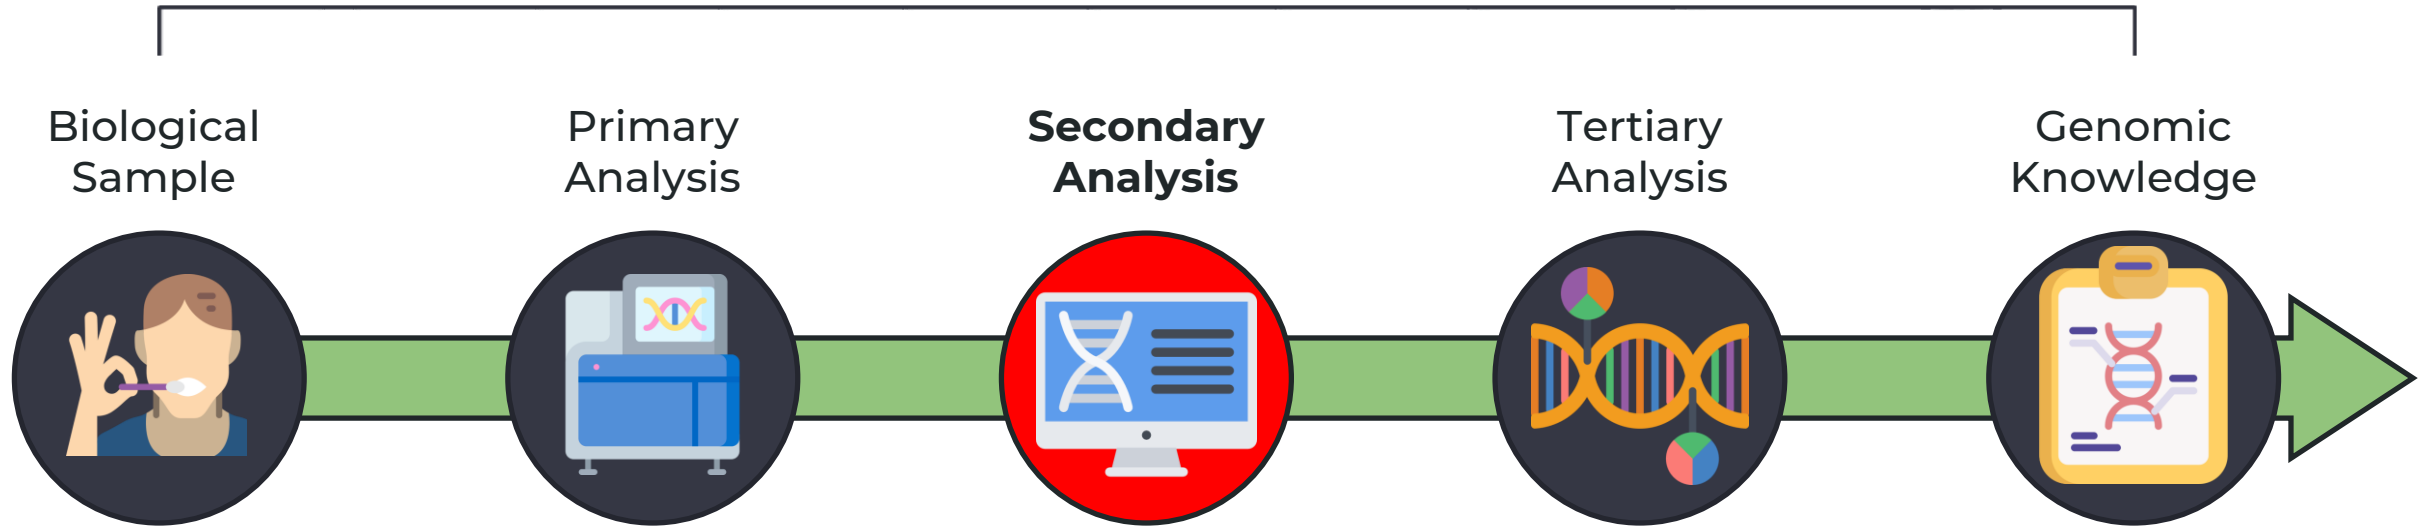

10 days - up to 18 MONTHS! *

Secondary analysis is the main bottleneck of the genome analysis workflow due to:

- **Redundant & error-prone processes**
- **Hard-to-use software tools**
- **Insufficient scalability**

We are not leveraging **Genomics' full potential**, yet.

Our Goal: Scaling up Genome Analysis

Scaling up **established bioinformatics pipelines is not sufficient** for leveraging the full potential of **always richer genomic data sets**.

Our Goal: Scaling up Genome Analysis

Novel computational paradigms are needed, and it makes sense to re-think the idea of a **'reference' genome**.

Genome Graphs naturally encode **variations**

Advantages of Graph-based Genomics:

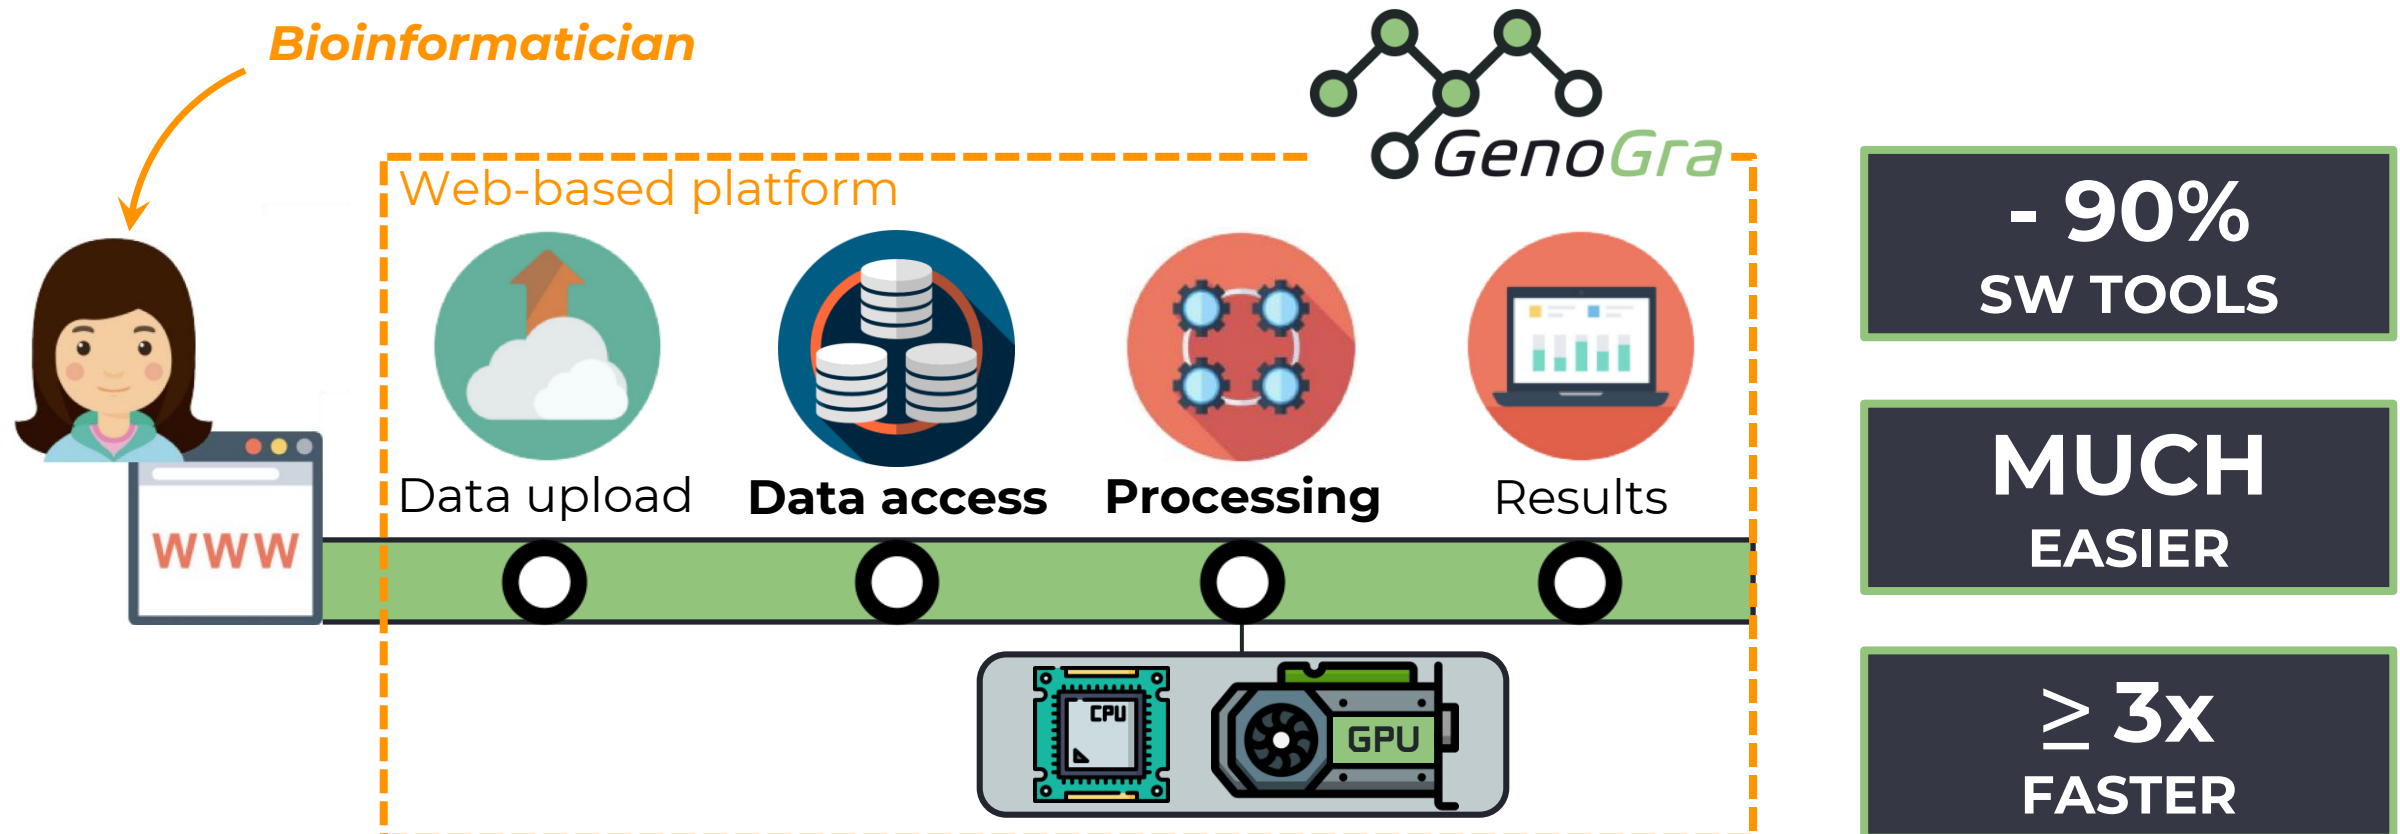

Great Scalability
Optimal Quality
Unexplored Applications

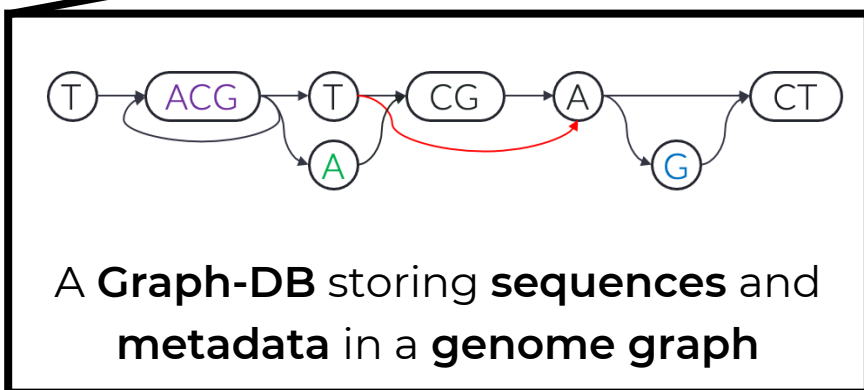

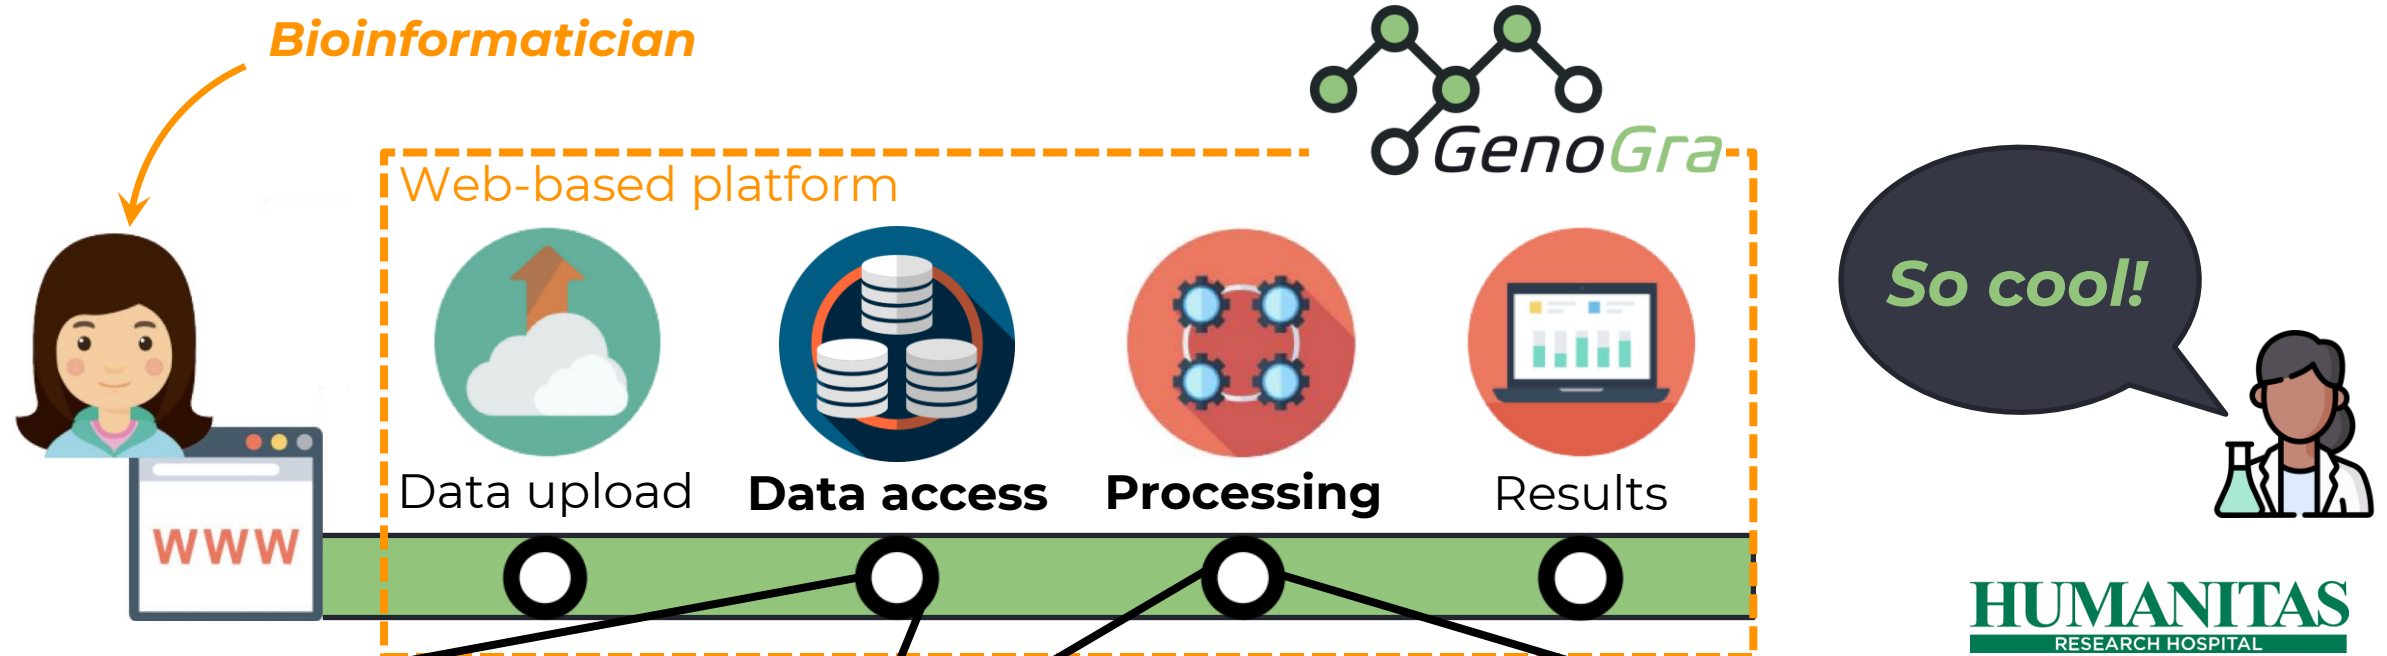

Genome Graphs naturally encode **variations**

A Vertical Solution to Scale Up Genome Analysis

GenoGra proposes a suite of **innovative graph-based genomic pipelines**, leveraging **hardware accelerators** without any effort by the end user.
